

BUSINESS CASE | HEALTHCARE

CHALLENGES IN CONTRACT MANAGEMENT

- With **over 400 accountable beds**, hospitals have a **complex structure**. Different departments are responsible for contracts, each of which require a specific follow-up. For example:
 - Medical devices: reagents, maintenance, (non-)provisioning;
 - Management: accreditations, clinical studies, NIHDI;
 - Prevention & Environment: radiation protection, waste, licenses;
 - Technical Services: concessions, HVAC.
 - ... *
- **No central archive**, contracts are scattered everywhere.
- **Unclear responsibilities** and manual contract follow-up.

For a complete overview of contracts, download our [contract checklist](#)

BEFORE CONTRACTIFY

- Each department **manages contracts in its own way**.
- **Compulsory admin and manual signing process** elevate the already high workload even more.
- Files are managed in Excel and stored on personal pc's. The predefined folder structure **limits your search options**.
- **No clear overview** of important deadlines and agreements.

AFTER CONTRACTIFY

- One central database in which every department can **work within predefined processes**. It includes defined reading rights and responsibilities.
- There is **certainty of follow-up**. In addition, automatic reminders alert you when an end date, notice period or important appointment/commitment is approaching.
- **Reduced workload**. It's easy to find files or information thanks to specific search filters and clear contract summaries.

IMPACT ON THE ORGANISATION

1. **Relieve medical staff:** focus on core business and tasks
2. **Minimize costs and risks**
3. **Efficient collaboration** and communication across all departments
4. **Faster approval and signing process**

WHAT IS THE BEST STRATEGY FOR CONTRACT MANAGEMENT IN YOUR COMPANY?
